Sanity website — five questions before we connect our database

UNIDCOM Research Information Management System (RIMS) ↔ Sanity project vj0axykv

UNIDCOM keeps its research directory (people, projects, scientific outputs) in its own database and admin portal. We have read the public Sanity dataset of the new site and want to feed it from our database **without breaking the site or overwriting your editorial work**. Nothing will be written to `vj0axykv` before questions 2 and 5 are answered.

MEMBERS IN SANITY	OUTPUTS IN SANITY	PROJECTS IN SANITY	WRITES MADE SO FAR
249	**1 596**	**43**	**0**
159 are also in our database	2011–2023; ours start in 2024	2012–2021; ours are current	read-only comparison only

Questions

#	Question	Why we ask
1	**Hosting.** Where is the Sanity-backed frontend deployed, and is it live anywhere yet? `unidcom-iade.pt` still serves the WordPress site.	We need to see the rendered result of any change.
2	**Studio schema.** Can we get access to the Sanity Studio repository (`sanity/schemaTypes`), or an export of the schema and validation rules?	Our documents must match your types exactly (e.g. `member.type`, `flexibleDate`, `team`).
3	**Publishing.** Does the site read Sanity live, or does it need a revalidate / rebuild hook after content changes? If so, which endpoint and secret?	Writing a document is not the same as updating a page.
4	**Editorial ownership.** Who edits Sanity today, and which fields do you consider editorial (photos, short bios, cover images, page copy) versus data we may update (names, ORCID, emails, project dates, publications)?	We will never overwrite an editorial field; we need the list.
5	**Access.** When we are ready, an Editor API token for `vj0axykv`, and whether a staging dataset exists or can be created.	First runs go to a sandbox, never straight to production.

What we intend to do, in order

Read-only comparison of both datasets	no writes to Sanity	Done
Link the 159 shared people inside our database	admin-reviewed, logged, reversible	In progress
Push new people, projects and publications to a sandbox dataset	new documents only; existing members untouched	Pending (blocked on 2 and 5)
Push to the production dataset	after your review of the sandbox	Not started
