

Rui's UI decisions — ready to check

What Rui asked on 25 Sep, what is live today, and how to confirm it in about an hour.

Portal on `main 0b2c26c`, deployed 30 Sep · CI and deploy green · 333 automated tests pass · 6 of 7 browser flows pass · every number below read from the live system on 29–30 Sep.

READY All 73 decisions in Rui's document were built. 70 are done exactly as asked. 3 are done differently or partly, each for a stated reason, and need Rui's yes or no. Nothing was deferred. The one step we did not do alone is putting a real profile on the public website: that needs a real person's record, and it is step C below.

DONE AS ASKED 70 of 73 decisions	NEED RUI'S CALL 3 done differently or partly	DEFERRED 0	AUTOMATED TESTS 333 all pass
---	---	----------------------	---

Rui asked vs we have

Rules for every page	Colours: sidebar and grey text kept for readability; (i) now on every field and action	5 of 6
Overview	Timeline, yellow banner, bio, summary tiles, issues named in full	16 of 16
My Profile	ORCID import only, photo upload, featured read only, Save draft / Submit	16 of 16
Scientific Outputs	Tabs, chips, live counters, Featured N/5, stars only on publications	16 of 16
UNIDCOM Admin	No semester tabs (no publication date); pipeline now has all 5 columns	14 of 15
Platform checks	Public-site step needs a real profile — step C	3 of 4

What we need from Rui this morning

Walk parts A, B and C (about 55 minutes); E if there is time. Then go through the decision table in part D and write one word per line: **keep**, **change**, or **later**. Anything marked **change** becomes a task we build today.

Before you start (10 minutes)

Portal	berlogabob.github.io/Unidcom-IADE
Public website	berlogabob.github.io/unidcom-site
Who logs in	Andrey, with ORCID — his account is both researcher and admin, and has 5 outputs
Full acceptance map	audit/2026-10-rui-ui-decisions.md (every decision → task → test)
Demo script	DEMO.md (15 minutes, same order as below)

What is normal, not a bug

- **Everything says “To be validated”.** On 29 Sep all 365 imported outputs and 184 imported profiles were set back to “To be validated by the researcher”, as Rui asked. The website still shows the same 76 publications and 183 people, because showing on the website is a separate decision now.
- **Nothing changes on the website until the sync runs.** It runs every night at 04:00 UTC, or on demand (step C10).
- **Researchers who have not logged in yet see nothing new.** Only 4 accounts are linked today.

#	Do	You should see	
1	Open the portal in a private browser window.	The sign-in page. No red errors.	☐
2	Sign in with ORCID as Andrey.	The chooser “How do you want to continue”.	☐
3	Choose As a researcher .	Overview opens (not Resources & Guidance).	☐

A · Researcher view (20 minutes)

Overview

#	Do	You should see	
1	Look at the top line of the page.	“UNIDCOM: To be validated by you · Website: Published”. It stays on every page.	☐
2	Look at the attention banner.	Calm yellow, not red. Each line ends with “→” and opens its action.	☐
3	Look under the banner.	Timeline Draft · Submitted · Under review · Published, with a date on each step already reached.	☐
4	Look at the identity card.	The first lines of the bio and “Edit bio →” (or “Add bio →”).	☐
5	Click a type tile, for example Livros .	Scientific Outputs opens filtered to that type.	☐
6	Go back; click Featured outputs .	Scientific Outputs opens on featured.	☐
7	Look at Recent Outputs.	Issues written in full, such as “Missing DOI”, never just “Issue”.	☐

My Profile

#	Do	You should see	
1	Open My Profile .	Subtitle “Your public researcher profile on the UNIDCOM website. UNIDCOM reviews before publishing.”	☐

#	Do	You should see	
2	Look at the ORCID block.	"ORCID connected · Last imported ...", button Import from ORCID , and "Editing here does not change your ORCID record." No "Sync" anywhere.	☐
3	Hover the (i) next to ORCID, Ciência ID, Email and Lab / cluster, and next to Import from ORCID and Upload photo .	One short sentence each — on fields and on actions.	☐
4	Click Upload photo , pick a JPG under 5 MB.	"Photo sent for UNIDCOM review". The photo on the page does not change yet.	☐
5	Look for featured outputs.	A read-only list "Featured outputs (N/5)" and "Manage in Scientific Outputs →". No checkboxes or stars here.	☐
6	Click Edit , change the phone, click Save draft .	"Draft saved — not sent to UNIDCOM yet".	☐
7	Open Edit again, click in Bio.	A counter "N / 300". Over 300 it turns amber and says the website shows the first 300. It never blocks typing.	☐
8	Click Submit for UNIDCOM review on the page; hover its (i).	(i) says "Saved changes will be re-submitted for UNIDCOM review". The top line changes to "UNIDCOM: Submitted".	☐

Scientific Outputs

#	Do	You should see	
1	Open Scientific Outputs .	Tabs Publications · Other activities , and "Featured N/5" on the right. No dropdown filters.	☐
2	Click a type chip, then one of its subtypes.	A second row of subtype chips; the list narrows.	☐
3	Click a year chip, then Issues only .	The counter line ("N outputs · ... · N with issues") changes with every click.	☐
4	Read one row.	"Type · Subtype", the issue in full or "No issues", and "On ORCID" or "Not on ORCID" as text.	☐
5	Switch to Other activities .	No stars on these rows. Stars only on publications, and a 6th star is refused.	☐
6	Look above the list.	"N outputs to be validated by you" and Submit for UNIDCOM review (N) . Do not click yet — step C uses it.	☐

B · Admin view (10 minutes)

#	Do	You should see	
1	Bottom-left, click Switch to admin .	The admin dashboard.	☐
2	Read the five tiles.	Integrated researchers 46 · Collaborators 109 · Profiles to approve · Outputs to approve · Proposals to review.	☐
3	Read Sync status .	Two lines: ORCID linked / not linked, and Website published / approved - not - published / not published. Numbers only, no bars.	☐
4	Read Issues .	Missing DOI and Not on ORCID. No "Not approved yet" (that is a review state, not an issue).	☐
5	Click a year chip in Outputs by type .	The numbers change. There is no semester chip — see part D.	☐
6	Click one Critical alert .	That researcher's page opens.	☐
7	Open People .	Each row has a Website pill: "Website · Published" or "Not published".	☐
8	Open Pending approval .	First tab Pipeline : To validate · Submitted · Under review · Approved, not published · Published. Andrey is under Submitted (from My Profile step 8).	☐

C · A bio change, end to end (25 minutes)

The whole path of one real change: Andrey edits his biography where Portuguese researchers keep it, and we follow it to the portal, through UNIDCOM review, onto the website and into the Sanity test copy. RIMS sends no e-mail; each hand-over below is a person clicking, and UNIDCOM sees a count on its dashboard.

#	Do	You should see	
1	Ciência Vitae : edit the summary (Resumo) and save.	Saved in Ciência Vitae. RIMS is not connected to Ciência Vitae — we only learn here whether it passes the text on to ORCID.	☐
2	ORCID (orcid.org, signed in): open Biography.	If Ciência Vitae passed it on, the new text is there. If not, paste the same text into Biography and save.	☐
3	Portal : sign out, then sign in with ORCID again.	Overview opens.	☐
4	My Profile → Biography.	Two columns: UNIDCOM (old text) and ORCID (new text), and Import bio from ORCID . ORCID can take a few minutes to show a change to others.	☐
5	Click Import bio from ORCID .	The ORCID text becomes a proposal for UNIDCOM review. The UNIDCOM text does not change yet.	☐
6	Switch to admin. Look at the dashboard.	Tile Proposals to review · 1 .	☐
7	Click the tile, then the tab Suggestions .	At the top: a row "Proposed by researcher", field Bio, with the new text. The older rows below are machine suggestions from ORCID and Crossref.	☐
8	Click Accept .	The row leaves the queue. Andrey's portal bio shows the new text.	☐

#	Do	You should see	
9	Open the public website, Andrey's page.	Still the old bio — the site changes on sync.	☐
10	GitHub → unidcom-site → Actions → Sync content from Supabase → Run workflow (preview off).	Green in about 2 minutes, then the site redeploys.	☐
11	Reload Andrey's page on the website.	The new bio.	☐
12	Sanity test: run the push for Andrey (we do this part).	His <code>member</code> document in the test project shows the new text as <code>shortBio</code> . The agency's Sanity is not touched.	☐

D • Rui's decisions (15 minutes)

Each line was built differently from the document, or only partly, for the reason given. Write **keep**, **change** or **later** in the last column.

Rui asked	We built	Why	Rui
Sidebar #16213A; grey text #888680	Sidebar #0E1525 kept; grey text #6A6862	His note says "as the platform already has"; #888680 fails contrast on the page background	
Outputs by type with year and semester tabs	Year chips only	Outputs carry a reporting year, no publication date; a semester needs a new date field	
Show one profile reach the website	Portal half done; website step is C10–C11 (and E10–E11)	Needs a real record; we would not publish a test profile	

Also decided by us — please confirm

Topic	What we did	Rui
Bio 300 characters	Soft counter: 109 of 112 live bios are longer (up to 20,627). Nothing is cut or blocked.	
Admin menu	Kept Projects, Structure, Data browser, Settings and Merge duplicates; added Pending approval; "Scientific outputs" renamed "Outputs".	
Approve vs publish for profiles	Approving a profile no longer publishes it; Publish to website is separate, as for outputs.	
Imported profiles	Profiles as well as outputs start "To be validated" (184 profiles).	
Pipeline length	Each column shows 10 people and "+N more".	

E • Optional: a new publication, end to end (15 minutes)

This is the only way to show a real publication going from the researcher to the website: add a publication that is not on the site yet. Use one of Andrey's real recent journal articles or books, so nothing fake reaches the public site.

#	Do	You should see	
1	Switch to researcher. Scientific Outputs → + Add output .	A step-by-step form: DOI → type → subtype → details → project → review.	☐

#	Do	You should see	
2	Fill it for a real article or book and finish.	The new output appears with status "Submitted".	☐
3	Switch to admin → Pending approval → Outputs to approve .	The new output is listed.	☐
4	Click Approve .	It is approved but not published — approving never publishes.	☐
5	Open the output's page.	A Website panel with Publish to website .	☐
6	Click Publish to website .	Website status becomes "Published".	☐
7	Pipeline tab: Andrey under Submitted; click Start review .	Andrey moves to Under review; his timeline shows "Under review" with today's date.	☐
8	Under review: click Approve .	Andrey moves to Published (his profile was already on the site from the import).	☐
9	Open the public website, find the article.	Not there yet — the site updates on sync.	☐
10	GitHub → unidcom-site → Actions → Sync content from Supabase → Run workflow (preview off).	The run finishes green in about 2 minutes, then the site redeployes.	☐
11	Reload the public website.	The article is on Andrey's page. Done: Submitted → Approved → Publish → visible.	☐

Known limits

- **Andrey's 5 ORCID outputs were classified on 30 Sep** (they had no category, so they were missing from the website); they appear on the site after the next sync.
- **Rui's own account has no outputs linked**, so his researcher view is almost empty. Use Andrey's for parts A and C.
- **The website updates only on sync** (04:00 UTC nightly, or step C10).
- **Ciência Vitae is not connected to RIMS**. It was left out of the pilot on 4 Aug: ORCID is the one source. Researchers keep Ciência Vitae, but RIMS reads ORCID.
- **No e-mail notifications**. A change on ORCID reaches RIMS when the researcher opens My Profile and imports it; UNIDCOM then sees **Proposals to review** on the dashboard. Automatic detection is possible later (a daily job already exists in the code, unscheduled).
- **Undo after the check**. Andrey's record was saved on 29 Sep 22:25; `audit/snapshots/2026-09-30-before-walkthrough.sql` puts it back and lists anything the walk added.
- **Sanity**: the test copy lives in a separate test project; the agency's project is not touched.
- **Security**: checked 29 Sep — no privileged database function can be called without signing in.
