

Rui's portal spec — gap and decision

Document 1 + 2 (10 Sep) against the portal on `main` and the live schema.

48 requirements checked against lib/ and supabase/migrations/ · 9 match · 17 partial · 19 gap · 3 conflicts. Nothing behind v2 is deleted (Rui, 10 Aug).

DATA OK The schema already holds what the spec needs. **UI WORK** The portal shows it as 25 pages and a mixed timeline instead of 5 pages with filters. Supabase: **4 additive columns/policies**, nothing renamed, 40 lines of SQL. Redesign deferred until the pilot has real data.

MATCH

as specified

PARTIAL

17

data exists, UI half

GAP

19

17 of them pure UI

CONFLICTS

3

with his 14 Aug notes

Rui wants vs we have

Area	Rui wants	We have	Fix
Navigation	5 items: Overview · My Profile · Scientific Outputs · Resources & Guidance · Help & Contacts. No WIP, no sub-pages	6 sections, 25 leaves, 8 "Work in progress" pages. 9 of our leaves are named as forbidden	UI
Overview	Identity header, 3 status pills, "Needs Your Attention" with actions, "No action required", type counts, "N / 5 featured", "Recent Outputs"	2 stat cards, one alert or literal "All good", "Recent papers", by-type WIP. All data present	UI
Profile	One page; every edit is a proposed change (Save Draft / Submit)	6 routes; owner Edit writes people directly. Staging exists for 4 signature fields (enrichment_suggestions)	UI
Biography	UNIDCOM vs ORCID, Compare, Import → proposal → review	Single bio; ORCID matrix exists, admin-only v2, applies directly	UI
Outputs page	One page, views + filters; never mix roles into outputs	5 leaves; own timeline merges roles, tags, mentorships, labs and outputs	UI
Filters	Search · Year · Type · Project · Activity · Review · ORCID · Website · Featured	Taxonomy cascade + Kind, year groups. project_outputs, matched_output_id, v_output_quality exist unused	UI
Add output	5-step wizard, conditional fields, Save Draft	One dialog. DOI-first lookup + duplicate guard (good, unspec'd). No steps, no project step	UI
Statuses	Review 5 · ORCID 5 · Website 4 · Quality 5, independent pills; "X / 5" featured	Profile 3, output 3 + rejection_reason, ORCID yes/no, website none, quality admin-only; "Highlights · N"	UI
ORCID	New · Matched · Differences · Duplicates · Not mine; "Add all unambiguous" + confirm	Add / Not mine / Add all (everything, no confirm). matched_output_id, find_similar_outputs exist	UI
Edit own output	Edit; approved → edit → "Changes Pending Review"	No researcher write on outputs. Edit leaf is a stub	DB
Website state	Separate from approval; "Approved · Not Published" valid	Approval is publication. No publish flag on outputs	DB

Supabase — now vs later

Change	Why not a UI hack	When
outputs.website_status; sync.py reads it	Approval ≠ publication is a fact the site build must read	now
output_taxonomy.kind (publication · activity) on the roots	§K: no parallel taxonomy in the portal; hardcoded roots in Dart would be one	now
enrichment_suggestions policy: researcher may stage subject_type='output' ON OWN outputs	Reuses table + admin Accept. "Changes Pending Review" with no new table	now
people.orcid_synced_at stamped by orcid_works.py	"Last synchronised" wanted in 3 places; candidates - derived fails for people with none	now
output_identifiers (DOI, ISBN, put-code)	42 DOIs, 0 ISBNs. Add on second identifier type or two-way ORCID	v1.1+
Provenance columns (source_system, imported_at, ...)	change_log already answers who/what/when/where	v2.0
Rename review states (+ under_review, draft)	Touches RLS, triggers, sync.py, report_data(), edge fn. A label map passes his tests	v1.1+
Notifications table	Derive from data	no
Sanity merge layer (feat/sanity-bridge)	§B.2 forbids it. Stays unmerged	no

Confirm with Rui

Topic	14 Aug note	10 Sep spec	Assumed
"Papers"	N9 "render to papers" → "My papers", "Recent papers"	Forbidden; acceptance test	spec wins
Profile Status page	N8 "stays"	§7 no separate page	spec wins
Sanity bridge	—	§B.2 no merge layer	admin-only, unmerged; ask

Build order (his Phase 1–9)

Phase	Work
1	One additive migration (4 "now" rows); sync.py filter
2	Profile → one page; edits staged; bio compare reuses the ORCID matrix (my_profile.dart)
3–5	Outputs → one page, outputs only; counts, search, filters, views, "N / 5"; wizard DOI → Type → Subtype → Metadata → Project → Review; ORCID buckets as a view
6–8	Admin Publish action; rejected shown as "Changes requested"; Overview rebuilt from states; header bell
9	Nav → 5 items; WIP + Research Activity Reporting behind v2; tests, Maestro, docs (nav_model.dart)
