

Rui's portal spec — gap and decision

Document 1 + 2 (10 Sep) against the portal on `main` and the live schema.

48 requirements checked against lib/ and supabase/migrations/ · 9 match · 17 partial · 19 gap · 3 conflicts. Nothing behind v2 is deleted (Rui, 10 Aug).

DATA OK The schema already held what the spec needs. **BUILT** Phase D closed the gap the same day: 10 waves, 17 PRs (48–64), 199 → 267 tests, 4 additive DB changes, nothing renamed, nothing behind v2 deleted. Open: login landing, the live click-throughs, Rui's three answers.

with his 14 Aug notes

Rui wants vs we had — and what closed it

Area	Rui wants	We had (10 Sep)	Done
Navigation	5 items: Overview · My Profile · Scientific Outputs · Resources & Guidance · Help & Contacts. No WIP, no sub-pages	6 sections, 25 leaves, 8 “Work in progress” pages. 9 of our leaves are named as forbidden	done D3 · 52 53
Overview	Identity header, 3 status pills, “Needs Your Attention” with actions, “No action required”, type counts, “N / 5 featured”, “Recent Outputs”	2 stat cards, one alert or literal “All good”, “Recent papers”, by-type WIP. All data present	done D9 · 64
Profile	One page; every edit is a proposed change (Save Draft / Submit)	6 routes; owner Edit writes people directly. Staging exists for 4 signature fields (enrichment_suggestions)	done D4 · 54 55
Biography	UNIDCOM vs ORCID, Compare, Import → proposal → review	Single bio; ORCID matrix exists, admin-only v2, applies directly	done D4 · 56
Outputs page	One page, views + filters; never mix roles into outputs	5 leaves; own timeline merges roles, tags, mentorships, labs and outputs	done D5 · 60
Filters	Search · Year · Type · Project · Activity · Review · ORCID · Website · Featured	Taxonomy cascade + Kind, year groups. project_outputs, matched_output_id, v_output_quality exist unused	done D5 · 58 60
Add output	5-step wizard, conditional fields, Save Draft	One dialog. DOI-first lookup + duplicate guard (good, unspec'd). No steps, no project step	done D6 · 61
Statuses	Review 5 · ORCID 5 · Website 4 · Quality 5, independent pills; “X / 5” featured	Profile 3, output 3 + rejection_reason, ORCID yes/no, website none, quality admin-only; “Highlights · N”	done D2 D4 · 50 54
ORCID	New · Matched · Differences · Duplicates · Not mine; “Add all unambiguous” + confirm	Add / Not mine / Add all (everything, no confirm). matched_output_id, find_similar_outputs exist	done D7 · 63
Edit own output	Edit; approved → edit → “Changes Pending Review”	No researcher write on outputs. Edit leaf is a stub	done D1 D5 · 48 59

Area	Rui wants	We had (10 Sep)	Done
Website state	Separate from approval; "Approved · Not Published" valid	Approval is publication. No publish flag on outputs	done D1 D8 · 48 62

Supabase — now vs later

Change	Why not a UI hack	When
outputs.website_status; sync.py reads it	Approval ≠ publication is a fact the site build must read	done D1 48
output_taxonomy.kind (publication · activity) on the roots	§K: no parallel taxonomy in the portal; hardcoded roots in Dart would be one	done D1 48
enrichment_suggestions policy: researcher may stage subject_type='output' on own outputs	Reuses table + admin Accept. "Changes Pending Review" with no new table	done D1 48
people.orcid_synced_at stamped by orcid_works.py	"Last synchronised" wanted in 3 places; candidates-derived fails for people with none	done D1 48
output_identifiers (DOI, ISBN, put-code)	42 DOIs, 0 ISBNs. Add on second identifier type or two-way ORCID	v1.1+
Provenance columns (source_system, imported_at, ...)	change_log already answers who/what/when/where	v2.0
Rename review states (+ under_review, draft)	Touches RLS, triggers, sync.py, report_data(), edge fn. A label map passes his tests	v1.1+
Notifications table	Derive from data	no
Sanity merge layer (feat/sanity-bridge)	§B.2 forbids it. Stays unmerged	no

Still to confirm with Rui: "papers" wording (his 14 Aug note vs this spec — spec applied), the Profile Status page (removed as §7 says), the Sanity bridge (§B.2 forbids a merge layer — branch left unmerged), and the login landing (Getting Started today, Overview per §5).

Built — Phase D, 10 Sep 2026

Wave	What landed	PRs
D1	4 additive DB changes, live + rollback-tested; site filter	48, site 3
D2–D3	labels; sidebar 25 leaves → 5 items, 0 WIP pages	49–53
D4–D5	profile one page, edits as proposals, bio compare; outputs page, filters, views, staged edit	54–60
D6–D9	wizard; ORCID buckets; admin publish; Overview from real states + attention badge	61–64

Tracker with every acceptance check: PLAN.md §Phase D. Rui's §V lines mapped to evidence: audit/2026-09-rui-acceptance.md. 199 → 267 tests; nothing behind v2 deleted.
