Demo 1: researcher, bio and outputs

Change the bio on ORCID, import it into RIMS, publish to Sanity and the website

Meeting Thu 29 Oct 2026, 14:00 · Hande, Sabino

One click in RIMS sends only approved content to Sanity and to the website mirror. Approval stays a separate step.

Status

Publish sends researcher, bio and outputs to Sanity	Checked live with a test researcher; no duplicates after repeated pushes.	Verified
Researcher appears on the website mirror	Added a test researcher, appeared after one sync (about 3 min), removed after the next.	Verified
Target Sanity	Publish writes to the official Sanity project (already set up and token verified).	Configured

Steps

#	Do	You should see
1	On orcid.org, edit your biography (visibility Public) and save.	New bio shows on your public ORCID page.
2	Sidebar bottom: Switch to researcher. My Profile, Biography. Click Import bio from ORCID.	UNIDCOM and ORCID biographies side by side; the import is proposed.
3	Pending approval, To review: open your person and approve the bio.	State Approved.
4	Ready to publish, Publish selected.	Result: Website and Sanity per person, with Undo.
5	Open the Sanity Studio, search the name.	Member with bio, output linked.
6	Start the site sync (GitHub Actions, Run workflow) right after step 4.	New bio on your page of the website mirror in about 3 min.

Spec check
Publish sends only what UNIDCOM approved. The decision for Hande: which parts of the website content may go online, and how often to publish approved researcher information.

Know before you start
The site sync runs every 10 minutes; trigger it by hand to avoid waiting. The Retry button for the website sync does not work yet (a GitHub token is not set). Delete all demo data afterwards.
