Demo 2: event

Create in RIMS, publish, see it on the website

Meeting Thu 29 Oct 2026, 14:00 · Hande, Sabino

Proof of the mechanism. Events are phase 3 and outside the v1.0 pilot, so this is not a commitment.

Status

Event appears on the website mirror	Created a published test event; it showed on the events page with type, date and description; removed on un-publish.	Verified
Event in Sanity	Reaches Sanity only through the full push, not from a single event button.	Partly
Commitment	Events are phase 3; show as proof of mechanism only.	Not v1.0

Steps

#	Do	You should see
1	Website in the sidebar, Events tab, Add event.	Event form.
2	Title, start date, type, location, about. Save.	Event in the list.
3	Switch Published on.	Switch on.
4	Start the site sync (GitHub Actions, Run workflow).	Run completes in about 3 min.
5	Open the website events page.	Event under Upcoming, with date, type and text.

After the demo

> **Clean up**
> Switch Published off and delete the event; the next sync removes it from the website. Only files named rims-* on the website are managed by the sync, so hand-written events are never touched.
