Sanity bridge — how to test the bulk link

Admin tool at People → Sanity merge. Branch feat/sanity-bridge, commits f088341 and cb119fb.

Sanity project `vj0axykv` is read only · Supabase is the master · every change is logged and reversible

The tool links our people to the agency's Sanity members and files what Sanity knows and we lack as **suggestions**. No person field is ever written automatically. Nothing is written to Sanity.

MATCHES IN QUEUE	SAFE TO LINK IN ONE CLICK	SUGGESTIONS IT WILL FILE	PERSON FIELDS CHANGED
159	**143**	**126**	**0**
130 email · 13 ORCID · 16 name	ORCID or email, no conflict	legal name 86 · ORCID 23 · bio 8 · photo 8 · Ciência 1	only the link and the log

1. Run the app as admin

The branch is not deployed. Run it locally against the live database and sign in with an admin account.

Step	Command or action
Check out the branch	`cd ~/Documents/GitHub/Unidcom-IADE && git checkout feat/sanity-bridge`
Start the app	`flutter run -d chrome --dart-define=SUPABASE_URL=https://nmghxkhstlnxypmfmfhk.supabase.co --dart-define=SUPABASE_ANON_KEY=<anon key>`
Sign in	Admin account (role `admin` in app metadata). Researcher accounts see "Admin access required".
Open the tool	Sidebar → People → **Sanity merge**, or `/app/admin/sanity`.

2. The three tabs

Tab	What it shows	Actions
Matches	Sanity members paired with a Supabase person by ORCID, email or name tokens; conflict count and "AMBIGUOUS" when two people tie.	**Link N safe matches** (bulk) · **Review & link** (per person, field matrix) · filter **Status mismatch**
Sanity only	Members with no Supabase counterpart; filter listed / unlisted on the site.	**Import** as draft person · **Ignore** · **Link…** to a person the matcher missed
Supabase only	Our people with no Sanity document.	none — read only

3. Test the bulk link

#	Do	Expect
1	Matches tab. Read the button label.	**Link 143 safe matches**. The 16 name-token matches are not counted and stay listed.
2	Press it. Read the dialog.	Text: "Sets the Sanity link on 143 people. No person field is changed; ORCID, bio, photo and name-form values from Sanity go to Suggestions for review."
3	Confirm.	Snackbar **Linked 143 · 126 suggestions filed · 16 skipped**. The list shrinks to 16 rows.
4	Open a linked person's page (admin view).	Values unchanged. Chip **from sanity** next to the Sanity link. Suggestions section lists the Sanity proposals with accept / reject. New panel **Sanity archive**: legacy projects and output count.
5	Accept one suggestion, e.g. ORCID.	Field fills, chip on that field reads **from sanity**, one `change_log` row with source `sanity`.
6	Toggle **Status mismatch** on the Matches tab.	Only the 16 remaining rows that are listed on the site but not active here, or the reverse. No action changes status.

4. Verify in SQL

Supabase dashboard → SQL editor, or the MCP `execute_sql` tool.

Query	Expected
`select count(*) from people where sanity_id is not null;`	143
`select field, count(*) from enrichment_suggestions where source = 'sanity' group by 1;`	legal_name 86 · orcid 23 · bio 8 · photo_url 8 · ciencia_id 1
`select count(*) from sanity_member_matches;`	16
`select count(*) from change_log where source = 'sanity';`	143 + one per accepted suggestion
`select md5(string_agg(coalesce(orcid,'')||coalesce(bio,'')||coalesce(photo_url,''), '|' order by id)) from people;`	same value before and after the bulk run (until you accept a suggestion)

5. Undo

The bulk run wrote only the link, the decision flag, log rows and pending suggestions. Three statements reverse it:

Statement
`update people set sanity_id = null where id in (select subject_id from change_log where source = 'sanity' and field = 'sanity_id');`
`update sanity_docs set decision = null, decided_at = null, decided_by = null where decision = 'linked';`
`delete from enrichment_suggestions where source = 'sanity' and status = 'pending';`

6. What is deliberately not done

Write to the official Sanity project	needs the agency's schema and token	Not started
Push to testUNIDCOM (ld5jhf23)	script and workflow are specified, not built	Pending (blocked on agency answers 2 and 5)
Import 43 legacy projects / 1 596 outputs	shown read-only on the person page instead	Not planned
Overwrite any person field from Sanity	suggestions only; accept per field	Never
